

## Scientific Opportunities with the LCLS

Jerome B. Hastings  
Stanford Linear Accelerator Center

The Linac Coherent Light Source will be the first free electron laser to reach hard x-rays. It will thus provide unique scientific opportunities for atomic resolution studies in broad scientific areas. These areas span from the biological, chemical and materials science to plasma and atomic physics. These unique opportunities will be discussed and the technical challenges that need to be met to fully realize the potential will be described.
